

# CellPower

## A unique antioxidant blend

**Res-Q CellPower** can re-fortify the body with essential levels of CoQ10 (one of the most critical enzymes necessary for production of energy within your body), vitamin C, selenium, lycopene, astaxanthin and lutein, all the antioxidants crucial for cell regeneration, detoxifying, controlling cholesterol, fighting inflammation, improving vascular function and discouraging blood clots.

Stress, pollution, ultraviolet radiation and other environmental hazards can lead to the formation of free radicals and carcinogens that damage cells, proteins and DNA within the body.

**Res-Q CellPower** is a power-packed blend of antioxidants that you can't afford not to add to your heart-healthy daily regimen.

## Res-Q CellPower combats the negative effects of cholesterol-reducing drugs

While cholesterol-reducing drugs can lower your cholesterol, which is good for your heart, they also deplete your body of a vital nutrient called CoQ10, which the heart needs to function properly. According to health experts, maintaining healthy CoQ10 levels is just as important to your heart as lowering your cholesterol.

Side effects of CoQ10 deficiency can cause muscle weakness leading to severe back pain, poor circulation, inflammation and even heart failure (remember your heart is a muscle!). So if you are not supplementing your medication or cholesterol-lowering regimen with CoQ10, you may actually be increasing heart-disease risk in the long run.

**Res-Q CellPower** contains an excellent source of CoQ10 (100 mg per capsule). By taking CellPower with your cholesterol-reducing medication, you can achieve the ultimate protection for your heart.
